

deployment task for the next lifecycle environment can be executed. The pattern is repeated for each of the lifecycle environments.

Shakeout tests are selected from the Regression test suite. At least one test is selected for each Feature-User Story pair to explicitly cover each pair. Similar to the selection above for Regression, the Shakeout selection would reduce the depth of coverage more often than not by selecting only the “happy path” tests for each pair

- f. **Test Environments** – Testing Stage relative to each environment will be as follows:

Development	Development Test
Test	System test
Acceptance	User Acceptance test
Research	Rsch

- g. **Test Tools** – The test tools in play for the release are:

Purpose	Tool	Tool Vendor / In-house
Automated Test Case Repository	Eclipse	Eclipse Foundation
Manual Test Case Repository	Excel	In-house template
Test Incident Management Repository	Jira	Atlassian

- h. **Test Data** –

- We utilized currently available ,201806 data

- i. **Release Management** –

As the functionality for each User story is completed in Development, it will be deployed to the Test and Acpt environments.

- j. **Appendix (optional)** –

Test Case
